

IILM UNIVERSITY, GREATER NOIDA

INTERNSHIP REPORT PRESENTATION

AI Technology, Digital Asset Management & Retrieval-Augmented Generation (RAG)

Enablement at Nine Triangles Digital Pvt. Ltd.

VARUN

Roll No. 2410031423 | B.Tech CSE, Batch 2024–2028

26 May 2026 – 15 July 2026

VARUN

B.Tech — Computer Science & Engineering

ABOUT THE STUDENT

Candidate Profile

Roll Number

2410031423

Institute

IILM University, Greater Noida, U.P.

Programme

B.Tech CSE, Batch 2024–2028

Internship Domain

AI Technology, DAM & RAG

Duration

26 May 2026 – 15 July 2026 (7 Weeks)

ABOUT THE ORGANIZATION

Nine Triangles Digital Pvt. Ltd.

Nine Triangles Digital Pvt. Ltd. is a boutique digital strategy consulting and integrated-implementation company headquartered in Noida, Uttar Pradesh, founded in 2017 by Krishna Mohan Jha. Within its Technology practice, the organization applies data-driven and machine-learning-aided approaches to help client brands gain an innovative edge.

Founded 2017

Boutique digital strategy consulting and integrated-implementation company.

Four Practice Areas

Creative, Technology, Media, and Data Analytics.

Technology Practice

Applies data-driven, machine-learning-aided approaches for client brands.

What the Internship Set Out to Achieve

General objectives, aligned with certificate-supported activities.

Understand DAM

How Digital Asset Management practices organize and govern digital content.

Study RAG Principles

How retrieval and generation stages combine to produce grounded AI responses.

Organize Data & Assets

Assist in making digital assets more discoverable and reusable.

Practice Prompt Engineering

Hands-on exposure to improving reliability of AI-generated output.

Test AI Workflows

Assist in testing and identifying gaps in expected vs. actual behaviour.

Support Knowledge Bases

Keep organizational information current and well-structured.

Structuring Knowledge for Reliable AI

Organizations generate digital assets faster than manual, folder-based systems can organize them — and AI systems built on top of disorganized information inherit the same problem, producing incomplete or ungrounded answers.

The problem area addressed during the internship was two-fold:

01

Structuring Knowledge

How digital assets and organizational knowledge can be structured and maintained so they form a reliable knowledge base.

02

Connecting to AI Tools

How that knowledge base connects to AI/LLM-based tools — through retrieval, prompt engineering, and systematic evaluation — so AI features stay accurate and useful.

TECHNICAL DOMAIN

01

Digital Asset Management (DAM)

DAM is the practice of organizing, tagging, storing, and retrieving an organization's digital content so it can be found and reused efficiently.

Asset Organization

Documents, creative assets, and structured records grouped into a coherent, searchable structure.

Tagging & Metadata

Consistent metadata, categories, and naming conventions applied to raw digital assets.

Foundation for AI

Well-organized assets become the raw material that reliable, context-aware AI systems depend on.

TECHNICAL DOMAIN

02

Retrieval-Augmented Generation (RAG)

RAG pairs a Large Language Model with a retrieval mechanism over an organization's own knowledge base, so responses are grounded in accurate, current information.

Retrieval Layer

Searches an indexed knowledge base for the most relevant context to a given query.

Augmented Prompting

Combines retrieved context with the user's query before passing it to the LLM.

Grounded Generation

The model generates responses grounded in retrieved facts, not training data alone.

TECHNICAL DOMAIN

03

Prompt Engineering

Prompt engineering is the practice of designing and refining input prompts to improve the accuracy and relevance of LLM output.

Iterative Drafting

Prompts drafted and tested against representative queries.

Observe & Refine

Refinement based on the relevance and accuracy of resulting output — an iterate-observe-refine cycle.

Applied During Internship

Hands-on exposure to this cycle was one of the most iterative parts of the internship methodology.

TECHNICAL DOMAIN

04

Knowledge Base Management

Maintaining a structured, current repository of organizational information that AI systems and employees can draw upon.

Grouping & Structuring

Related content grouped, terminology standardized, duplication removed.

Keeping Content Current

A key challenge is keeping the knowledge base current as underlying assets change.

Supports Retrieval Quality

A well-organized knowledge base directly improves the quality of what RAG retrieves.

TECHNICAL DOMAIN

05

AI Workflow Testing & Evaluation

Systematic checking of AI-powered features against expected behaviour, relevance, and usability criteria.

Exercising Workflows

AI workflows exercised with varied inputs to surface edge cases and inconsistencies.

Evaluating Output

AI-powered features assessed against usability and performance considerations.

Feedback Loop

Findings feed back into indexing and knowledge-base layers for continuous improvement.

Generic AI / DAM-RAG Workflow

Technology-agnostic workflow — not a claim of Nine Triangles' proprietary production architecture.

	Digital Assets	Documents, media, and structured records
	Asset Organization & Knowledge Base	Classifying, tagging, and structuring content
	Data Processing & Indexing	Converting content into embeddings / structured indices
	Retrieval Layer	Similarity search against the indexed knowledge base
	Prompt Construction	Combining retrieved context with the user query
	LLM Generation	Producing a response grounded in retrieved context
	Evaluation & Validation	Assessing relevance, accuracy, and usefulness

A Seven-Week Learning Journey

A structured, progressively deepening approach across the internship period.

EXPECTED OUTCOMES

Skills & Capabilities Gained

Working understanding of DAM practices and their role in supporting downstream AI systems.

Applied understanding of RAG, including the relationship between retrieval and generation quality.

Improved data-organization skills — tagging, structuring, and de-duplicating digital content.

Hands-on prompt engineering — iterative refinement of prompts against observed output quality.

AI workflow testing exposure and familiarity with common failure modes.

Knowledge-base management practices that keep information usable over time.

Feature evaluation experience — assessing AI features and documenting results professionally.

Professional growth in analytical thinking, collaboration, and technical communication.

Key Activities & Objective Mapping

Every activity below is directly attested by the internship completion certificate.

Certificate-Supported Activity	What It Involved
AI Research	Supporting AI technology initiatives and exploratory research
Data Organization	Structuring and tagging digital assets for discoverability
Prompt Engineering	Iterative refinement of prompts for AI-generated output
Testing AI Workflows	Exercising workflows to surface gaps and inconsistencies
Knowledge Base Management	Keeping organizational information current and structured
Evaluating AI-Powered Features	Assessing performance and usability of technology platforms

CERTIFICATION

Successfully Completed

Status

Successfully Completed

Team

AI Technology Team

Duration

26 May 2026 – 15 July 2026

Issued By

Nine Triangles Digital Pvt. Ltd.

This is to certify that **Mr. Varun** has successfully completed his internship at **Nine Triangles Digital Pvt. Ltd., Noida**, under the **AI Technology Team**, from **26th May 2026 to 15th July 2026**.

During the internship period, he made valuable contributions to the organization by supporting AI technology initiatives, with a focus on Digital Asset Management (DAM) and Retrieval-Augmented Generation (RAG) solutions. He assisted in AI research, data organization, prompt engineering, testing AI workflows, knowledge base management, and evaluating AI-powered features to enhance the performance and usability of our technology platforms. Throughout his internship, he consistently demonstrated professionalism, dedication, analytical thinking, and a strong willingness to learn emerging AI technologies.

We appreciate his commitment and performance during his tenure with us and wish him continued success in all his future professional endeavors.

For **Nine Triangles Digital Pvt. Ltd.**

Conclusion & References

This internship provided a working, applied understanding of how AI Technology teams organize digital assets, apply Retrieval-Augmented Generation, and evaluate AI-powered features — bridging classroom learning with real professional practice.
